The Ganga-Brahmaputra-Meghna Delta is one of the largest and most fertile deltas in the world. It is formed by the confluence of the Ganges, Brahmaputra, and Meghna rivers, and covers an area of over 100,000 square kilometers. The delta is home to over 100 million people, and is a major source of food, water, and transportation for the region.

The Ganges River

The Ganges River is the largest river in the Ganga-Brahmaputra-Meghna Delta. It originates in the Himalayas and flows for over 2,500 kilometers before reaching the Bay of Bengal. The Ganges is a sacred river to Hindus, and is considered to be the most important river in India.

The Brahmaputra River

The Brahmaputra River is the second largest river in the Ganga-Brahmaputra-Meghna Delta. It originates in Tibet and flows for over 2,900 kilometers before reaching the Bay of Bengal. The Brahmaputra is a major source of water for the people of Bangladesh, and is also used for irrigation and transportation.

The Meghna River

The Meghna River is a distributary of the Ganges and Brahmaputra rivers. It is the southernmost part of the delta, and flows for over 100 kilometers before reaching the Bay of Bengal. The Meghna is a major source of fish for the people of Bangladesh, and is also used for transportation.

The Ganga-Brahmaputra-Meghna Delta: A Unique Ecosystem

The Ganga-Brahmaputra-Meghna Delta is a unique ecosystem that is home to a wide variety of plants and animals. The delta is also home to a number of important cultural and historical sites. The delta is a major tourist destination, and is also a popular place for fishing and boating.

The Ganga-Brahmaputra-Meghna Delta is a vital part of the subcontinent of South Asia. The mighty rivers that shape the delta provide water, food, and transportation for the region. The delta is also home to a unique ecosystem and a number of important cultural and historical sites. The Ganga-Brahmaputra-Meghna Delta is a truly remarkable place.
