

# Wear Glasses After LASIK Surgery: An In-Depth Guide

LASIK (Laser-Assisted In Situ Keratomileusis) surgery is a highly successful procedure that can correct numerous vision problems, including nearsightedness, farsightedness, and astigmatism. However, some patients may still need to wear glasses or contact lenses after LASIK surgery. This article will discuss the reasons why patients may need to wear glasses after LASIK surgery, the types of glasses available, and tips for choosing the right glasses.

## Why Do Some Patients Need to Wear Glasses After LASIK Surgery?

Most patients who undergo LASIK surgery achieve excellent vision results. However, some patients may still need to wear glasses or contact lenses for a variety of reasons. These reasons include:

- **Residual refractive error:** In some cases, the LASIK procedure may not fully correct the patient's refractive error. This can result in nearsightedness, farsightedness, or astigmatism that requires correction with glasses or contact lenses.
- **Age-related changes:** As we age, our eyes naturally undergo changes that can affect our vision. These changes may include presbyopia (the need for reading glasses) and cataracts (clouding of the lens in the eye). These conditions may require glasses or contact lenses to correct vision.
- **Eye injuries or diseases:** Eye injuries or diseases can damage the cornea or other parts of the eye, which can affect vision. Glasses or contact lenses may be necessary to correct vision in these cases.

### **Types of Glasses Available After LASIK Surgery**

There are a variety of glasses available for patients who need vision correction after LASIK surgery. These include:

- **Single-vision glasses:** Single-vision glasses are designed to correct vision at a single distance, such as near or far. They are the most common type of glasses prescribed after LASIK surgery.
- **Multifocal glasses:** Multifocal glasses have multiple prescriptions that are designed to correct vision at different distances. They are a good option for patients who need to see clearly at both near and far distances.
- **Progressive addition lenses (PALs):** PALs are a type of multifocal lens that has a gradual change in prescription from near to far vision. They are a good option for patients who need a wide range of vision correction.

- **Computer glasses:** Computer glasses are designed to reduce eye strain and fatigue from working on a computer. They may have special coatings or filters that reduce glare and blue light exposure.
- **Sunglasses:** Sunglasses are essential for protecting the eyes from the sun's harmful UV rays. They can also be fitted with prescription lenses to correct vision.

### **Tips for Choosing the Right Glasses After LASIK Surgery**

When choosing glasses after LASIK surgery, there are a few things to keep in mind:

- **Your prescription:** The first step is to get a prescription from your eye doctor. Your prescription will specify the type of lenses you need and the strength of the prescription.
- **Your lifestyle:** Consider your lifestyle and activities when choosing glasses. If you spend a lot of time working on a computer, you may want to choose computer glasses. If you are active and spend a lot of time outdoors, you may want to choose sunglasses with a prescription.
- **Your personal style:** Glasses are a fashion accessory, so it's important to choose a style that you like. There are many different styles of glasses available, so you can find a pair that suits your taste and personality.

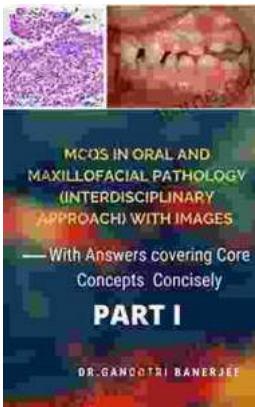

Wearing glasses after LASIK surgery is a common occurrence. There are a variety of reasons why patients may need to wear glasses, and there are also a variety of glasses available to meet their needs. By following these tips, you can choose the right glasses to correct your vision and meet your lifestyle needs.
